

This course will be taught in Portuguese/English.

Introduction:

The ScrumMaster Course is a two-day course, which introduces the concepts of Agile Methodology and Scrum Framework.

This course will also teach attendees how to plan and run Sprint Planning Meetings, Daily Scrum Meetings, Sprint Reviews, Sprint Retrospectives and much more.

We need to keep in mind that there are very few rules to Scrum so it is important to learn its principles by experiencing them directly from those who have successfully implemented them in the software industry. The course format consists of multiple lecture topics, group exercises and group discussion. Great part of the time will be devoted to analysis of the “real-world” industry experiences of the ScrumMaster Course instructor based on case study examples and his experience on coaching and managing Business, Projects and Teams transitioning to the Agile World.

Course Outline:

- Overview of Agile - Gain a deep understanding of how the Agile Manifesto came about and why.
- Roles in Scrum - What is the job of the ScrumMaster? How about the Product Owner and the Team? Learn deep insights into these roles and how they work collaboratively together.
- Impacts of Multitasking - We will take a journey through the world of multitasking to really understand the negative impacts it brings to teams.
- Product Backlog - The Product Backlog is the key to any successful Scrum team. We will explore what comprises a good Product Backlog, techniques for managing it and what happens when it goes unattended.
- Sprinting - In this part of the course, we have a deep dive into a good and well prepared Sprint Backlog, what it really means to be done and how to decide on Sprint length.
- Release Planning - Release planning is a core component of good Agile project management. We will explore how to build a release plan and forecast (Estimation) when the work will be delivered.
- Scaling Scrum - Not all teams are in the same office so we will look at how companies have successfully scaled Scrum by distributed teams.

- And more...

Who Should Attend:

The course target is for anyone looking to adopt Scrum or learn more about it. As well, software development teams, including program and project managers, analysts, developers, testers, team leads

People from a wide range of industries have attended this course as it covers the core fundamentals of Scrum and agile development.

Regardless of your industry or role at your company, you will leave this course with a solid understanding and knowledge on the values and principles that Scrum and agile convey, as well as how to run an effective Scrum team.
